Systems Analysis Branch/P&PS/OL
WEEKLY STATUS REPORT
Week of 21 to 25 November 1983

I.   Major Activities During the Past Week:

        None to report.

II.   General Items:

        None to report.

III.   Problems:

        A. Support to OL:

            FARS (Federal Automated Requisitioning System). During the
        past week a problem has occurred sending messages to DATEX. One
        file in particular could not be transmitted. Two possible causes
        were that 1) the file was too large to transmit and/or 2) an
        invalid character in the file prevented transmission. The records
        for the file will be reinput and sent over to DATEX in smaller
        groups to see if this eliminates the problem. (U)

            AVRS (Agency Vehicles Records System). The latest input to
        the AVRS system could not be stored on the NIPS database. The
        normal procedures used in dealing with this problem have not
STAT   worked. ⬚⬚⬚⬚⬚⬚⬚⬚⬚⬚, the IBM specialist on NIPS databases, will be
STAT   contacted next week to assist in resolving the problem.⬚⬚⬚⬚⬚⬚⬚⬚
        (U)

IV.   Upcoming Events:

        None to report.
